PROFESSIONAL SUMMARY

Full-stack software engineer with an enterprise IT background and hands-on experience building, testing, and deploying production-ready web applications end to end. Proficient in JavaScript, TypeScript, React, Next.js, Node.js, PostgreSQL, and REST APIs, with experience using AI-assisted development tools while independently reviewing generated code for correctness, maintainability, and security. Combines software development skills with enterprise experience in troubleshooting, security, systems administration, and technical support at scale.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, SQL, HTML5, CSS3, PowerShell

Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, Socket.IO, WebSockets, Prisma, Tailwind CSS, Bootstrap

Databases & APIs: PostgreSQL, MySQL, MongoDB, Supabase, RESTful APIs, Web Services, JWT, OAuth, API Integration, Serverless Functions

Development & DevOps Tools: Jest, React Testing Library, Vite, Git, GitHub, GitHub Actions, Docker, Vercel, Figma, Postman

Engineering Practices: Full SDLC, Agile/Scrum, CI/CD, Code Reviews, Unit & Integration Testing, Accessibility (WCAG), Responsive Design

AI-Assisted Development: Claude Code, GitHub Copilot, ChatGPT, LLM/AI API Integration, Prompt Engineering, AI Output Review & Validation

Enterprise IT: Microsoft 365, Microsoft Intune, Microsoft Entra ID, Active Directory, ServiceNow, AvePoint, Technical Documentation

SOFTWARE ENGINEERING EXPERIENCE

Full-Stack Developer | *Good Soil (Fall Code Jam)* *Oct 2026 – Present*

- Building, testing, and deploying a full-stack web application under deadline using a modern TypeScript/React/Node stack
- Collaborating with developers to scope and commit to user stories, reviewing code through Git/GitHub and team conventions
- Translating requirements into working features and iterating toward reliable, performant software

Full-Stack Developer | *Cherry on Tech (Nonprofit Program)* *Aug 2026 – Present*

- Built and shipped a live, accessible web application from concept through deployed MVP, collaborating in a cross-functional Agile squad with UI/UX designers and product managers
- Developed responsive, semantic, mobile-first interfaces with an accessibility-first approach aligned with WCAG standards
- Translated product requirements and user stories into technical implementations through prototyping, sprint planning, and iterative development
- Contributed to technical discussions, code-quality standards, and team workflows to support maintainable, reliable software delivery

Software Engineer | *100devs (Training Program)* *Jan 2026 – Present*

- Built and deployed 10+ full-stack web applications using React.js, Node.js, Express.js, MongoDB, and RESTful APIs in collaborative Agile/Scrum environments
- Designed and implemented frontend and backend features spanning UI development, API integration, server-side logic, database operations, and deployment
- Wrote and maintained 50+ unit and integration tests across frontend and backend code, contributing to code reviews, sprint planning, and daily standups
- Used AI-assisted development tools to accelerate implementation and review workflows while independently validating generated code for correctness, maintainability, security, and compatibility with existing architecture

Full-Stack Web Developer | *Iyashicoded (Freelance)* *Dec 2025 – Present*

- Architected and delivered full-stack applications for 3+ clients, owning the software development lifecycle from requirements gathering through development, deployment, and maintenance
- Translated client requirements into responsive, production-ready React applications with mobile-first architecture, WCAG accessibility, and intuitive user experiences
- Designed and integrated RESTful APIs and third-party services across full-stack applications, handling data flow between frontend, backend, and external systems
- Maintained CI/CD pipelines and Git/GitHub workflows to support version control, automated deployment, and consistent software delivery

SOFTWARE ENGINEERING PROJECTS

404 Offline | Atlanta-Based Nerd Community Application | *React, Vite, Node.js, Express, PostgreSQL, Prisma, Leaflet.js* | **Live** · **Code** *August 2026*

- Architected a React frontend and RESTful API spanning 5 resource types and 15+ endpoints, with relational data modeled and persisted through Prisma ORM
- Implemented geolocation-based sorting, global search, tag filtering, and an interactive Leaflet.js map with category-specific custom pins
- Built persistent attendance tracking, .ics calendar downloads, threaded comments, dark mode, and skeleton loading states to support a complete community experience

Penciled In | Real-Time Collaboration Application | *React, TypeScript, Node, Express, Socket.IO, PostgreSQL* | **Live** · **Code**
July 2026

- Built a real-time collaborative Kanban board with drag-and-drop interactions, card creation, and cross-client presence synchronization using WebSockets
- Designed an authoritative server architecture that broadcasts move events rather than full board state, enabling deterministic resolution of concurrent edits
- Implemented write-behind persistence to PostgreSQL while keeping drag interactions in memory for low-latency updates; configured GitHub Actions CI to run on every push

Kagami | AI-Integrated Journaling Application | *React, Vite, Google Gemini API, Vercel Serverless Functions* | **Live** · **Code**
June 2026

- Built and deployed an AI-integrated journaling application that generates tailored reflections using the Google Gemini API, with provider integration isolated for future extensibility
- Architected a serverless API proxy that keeps AI credentials server-side, preventing exposure of the Gemini API key in the client
- Implemented asynchronous error handling, in-character failure states, and a guardrail that surfaces crisis resources when appropriate

ENTERPRISE IT EXPERIENCE

Enterprise Mobility & Collaboration Systems Engineer | *Abercrombie & Fitch Co. (via Apex Systems)* *Jan 2025 – Present*

- Managed 1,000+ corporate devices through Microsoft Intune, enforcing access controls and maintaining 99% compliance with enterprise security policies
- Developed PowerShell scripts to automate device provisioning and remediation, reducing manual effort and improving consistency across device management workflows
- Partnered with cross-functional teams and vendors to troubleshoot and resolve complex, multi-system issues across enterprise environments
- Configured and supported Microsoft 365 collaboration platforms including Teams, SharePoint, and OneDrive, ensuring reliable access and secure data governance for enterprise users
- Administered Microsoft 365, AvePoint governance policies, and Microsoft Entra ID identity and access controls in alignment with enterprise cybersecurity requirements

Tier 2 Regional IT Service Desk Analyst | *American Honda Motor Company (via Robert Half)* *Oct 2024 – Dec 2024*

- Resolved 30–50 tickets daily within SLA, diagnosing and troubleshooting multi-system issues across Microsoft 365, VPN, and Active Directory
- Maintained ServiceNow knowledge base documentation, improving first-contact resolution and reducing repeat incidents

Tier 1 Help Desk Support Specialist | *Williams-Sonoma, Inc.* *Oct 2020 – Jul 2024*

- Resolved 200+ tickets weekly through high-volume ServiceNow queues, consistently meeting SLA and performance targets
- Provisioned accounts and managed access controls and authentication across multiple enterprise platforms and directories

EDUCATION

B.S. Literature, Media & Communication · B.S. Japanese Applied Language & Intercultural Studies · Korean Minor | *Georgia Institute of Technology*

IT Support Technical Training Program | CompTIA A+ · Google IT Support · Google Data Analyst · ITIL 4 Foundation · DevOps Leader | *Per Scholas*

Full-Stack Software Engineering Bootcamp | TypeScript · React · Prisma · Node.js · Express.js · MongoDB · PostgreSQL | *Color Coded Labs*
